Virtual environments on demand. Scalable solution for virtual labs in the cloud.

Speed of Light Media has developed the CloudLab product to allow you to build, manage, and share your virtual environments quickly and easily for sales demos, QA testing, and training.

The cloud promises cost savings over buying hardware and hiring infrastructure experts to maintain it. However, hiring and training staff to take advantage of complex cloud technology is a major challenge. CloudLab makes it easier to build and automate test infrastructure which saves you time.

SAVE MONEY ON YOUR AWS OR AZURE MONTHLY EXPENSE!

CloudLab integrates directly to AWS and AZURE to make sure servers are not running when they do not need to be running.

- Create software test environments with a visual designer
- Share as many copies of your environment as you like
- CloudLab works in Private Cloud – Hybrid Cloud – Public Cloud Implementations
- Automate your development and test efforts
- Create disposable development environments
- Simplify support for custom configurations
- Easily setup a test matrix
- Business Application QA Testing
- Training Platforms for global product training
